DETAILED ACTION

Claim Objections

1. Claims 5-12 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot depend from any other multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claims not been further treated on the merits.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Gardes 4,599,172 or 4,410,425 respectively. Gardes shows a device for removal and filtration of drilling fluid in top hole drilling, where a suction module comprises an elongated pipe-formed body (28, 22 respectively) which is open at the top and is arranged to an ocean-bottom penetrating pipe (col. 1, lines 6+), through which is led a drill stem for drilling of the top hole, and the pipe-formed body comprises a filtration device (64, 36 respectively) with through openings, where said openings are arranged to let through to at least one outlet passage (30, 30 respectively) in the pipe wall, filtered return drilling fluid containing dispersed material, such as swelling clay or stones, having that filtered

Art Unit: 3671

return drilling fluid from the bore hole is exported to a pump module (not shown) through the at least one outlet passage (30, 30 respectively) in the pipe wall, where the drilling fluid is of a size less than the diameter of an inlet pipe of the pump or openings of the pump, and that the upper part of the pipe-formed body is arranged to contain return drilling fluid, which is not fed to the pump module, and where the level/volume of said drilling fluid stands as a "plug" above the outlet for the pump's suction pipe (30, 30 respectively) and is arranged to seal against the drill stem (18, 20 respectively).

As concerns claim 2, Gardes shows the level/volume of return drilling fluid in the pipe-formed body (30) is arranged to be adjusted by regulation of the capacity of the pump (figure 1).

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 3-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gardes 4,599,172 or 4,410,425. Gardes does not show the suction module (10) comprises a camera and/or a sonar for monitoring of the level of the drilling fluid, i.e. the "plug" of return drilling fluid, in the pipe-formed body, and that monitoring signals are sent to an operator for regulation of the capacity of the pump or measuring equipment

Art Unit: 3671

for monitoring of the level of drilling fluid, i.e. the "plug" of return drilling fluid, in the pipe-formed body (30), and that monitoring signals are sent to an operator, or directly to the pump (12) for regulation of the capacity of the pump. However, Examiner takes official notice that having measurements to monitor fluid level is obvious in the art of oil fluid recovery in order to properly control the drilling operations.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
